1 - 8 turbines may be theoretically visible

9 - 17 turbines may be theoretically visible

18 - 26 turbines may be theoretically visible27 - 35 turbines may be theoretically visible

Maximum Field of View (FoV) if all turbines were visible

Note:
This drawing is based on a computer generated Zone of Theoretical Visibility (ZTV). The areas shown indicate the maximum theoretical visibility of the proposed turbines using Aerial Photography Derived 2m DSM height data only. The ZTV calculation only takes into account any surface features such as trees and buildings within the Aerial Photography Derived 2m DSM boundaries. The ZTV also includes an adjustment that allows for the Curvature and Light Refraction of the Earth.
