11th May 2020

Dear Sir/Madam

Stornoway Wind Farm – Peat Slide Risk Assessment– Stage 2 Checking Report Clarification

In response to the Stage 2 checking report audit from Ironside Farrar Ltd dated April 2020, this covering letter is provided to address the final clarification raised in relation to the Peat Slide Risk Assessment and Peat Management Plan for Stornoway Wind Farm.

The point raised by Ironside Farrar Ltd and associated project team response are summarised as follows:

Ironside Farrar Ltd comment:

Whilst lochs and water course are included in Table 6 of Section 4.11, review of the individual scoring of the peat probes (Appendix B: Hazard Rank Assessment Records) doesn't show any receptor co-efficient scoring over that of 6. This is surprising since there appears to be a number of probe locations in relatively close proximity to a number of lochs and more significant water courses.

Further justification/ clarification is required why this is the case, and the risk assessment updated accordingly.

Arcus Response:

Following review of Ironside Farrar Stage 2 Checking Report, as noted by IF, there were no references in our hazard rank assessment appendix records to 'Water Feature Major'. This was re-visited and an anomaly within our calculations was noted. The appendix record has been reviewed and revised which indicated 149 probe locations were at a 'Water Feature Major' as its closest receptor.

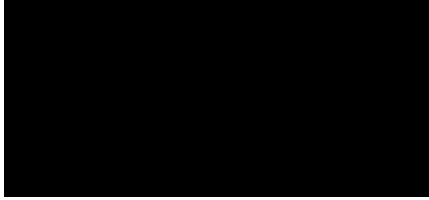

However, overall Hazard Rank Zonation values only changed in 5 locations, with values changing from '6' to '10'. The probe locations were all recorded in very close proximity to lochs (five at T13 and one at T27) at Loch a' Clachain and Loch Garbhaig respectively. The changes in these values did not affect the overall zonation ranking of either the probes or the allocated Overall Hazard Zone.

It should be noted that these probes were situated on the periphery of the intense 10m centre grid spacing at each of the turbines, almost 50m from proposed turbine locations, and it is considered unlikely to be affected by the construction works associated with each of the turbines.

Appendix B has been updated and is included with this letter.

I trust this clarification addresses Ironside Farrar's comment within the Checking Report, however, if you have any further queries, please do not hesitate to contact the undersigned.

Yours sincerely,

David Ballentyne
Senior Engineer
